Радови укључени у Зборник прихваћени су од стране рецензената и приказани на 65. годишњој конференцији Друштва за ЕТРАН (ЕТРАН 2021) и 8. Интернационалној конференцији (ИцЕТРАН 2021) које су одржане од 08. до 10. септембра 2021. године у Етно селу Станишићи, Република Српска.

Број пријављених радова за конференције ЕТРАН и ИцЕТРАН је 162. Рецензије радова обавило је укупно 266 рецензената. Просечан број рецензената по раду био је 2. Прихваћен је и на конференцији приказан 141 рад који су публиковани у овом зборнику.

Заједничка тематска сесија "Дигитална Србија и Република Српска" окупила је научнике, стручњаке, истраживаче, представнике високошколских установа и представнике државе који су изнели своје погледе на значај и развој информационих технологија и вештачке интелигенције, на њихову улогу у развоју привреде и на одговарајуће промене у образовном систему. Координатори сесије били су проф. др Бранко Докић и проф. др Мило Томашевић, док су активни учесници сесије били Мр Срђан Рајчевић, Министар за научнотехнолошки развој, високо образовање и информационо друштво у Влади Републике Српске, др Саша Стојановић, помоћник Министра за просвету, науку и технолошки развој Владе Србије, проф. др Мило Томашевић декан Електротехничког факултета Универзитета у Београду, проф. др Зоран Ђурић, декан Електротехничког факултета Универзитета у Бањој Луци и проф. др Божидар Поповић, декан Електротехничког факултета Универзитета у Источном Сарајеву.

Координатор специјалне седнице на секцији Метрологија, под насловом "Стохастичке методе у мерењима" био је Владимир Вујичић. Координатор специјалне седнице на секцији Рачунарство и вештачка интелигенција, под насловом "Шта рачунари данас не могу" био је Бошко Николић. У оквиру секције за електроенергетику одржана је специјална седница "Електроенергетика у 21. веку" у организацији Одбора за енергетику САНУ.

Члан Председништва Предраг М. Петровић био је координатор заједничке тематске седнице организоване као омаж Милольбу Смиљанићу, Почасном члану Друштва за ЕТРАН и Генералном секретару Академије инжењерских наука. Уз поруку "Драги Мићо, дивљење и поштовање са захвалношћу" говорили су Предраг М. Петровић, Дејан Б. Поповић, Председник ЕТРАН-а.

Председник ЕТРАН-а, академик Дејан Б. Поповић био је координатор заједничке тематске седнице организоване као омаж академику Нинославу Стојадиновићу, бившем Председнику ЕТРАН-а, члану Председништва и Заслужном члану Друштва за ЕТРАН. Уз поруку "Остајемо да негујемо његове идеје" говорили су проф. др Данијел Данковић, Дејан Б. Поповић, Председник ЕТРАН-а и Братислав Миловановић, академик АИНС.

Посебно се захваљујемо организаторима из Републике Српске и домаћинима из Бијељине, који су допринели стварању услова за рад и плодну размену мишљења и критички осврт на резултате у оквиру свих секција.

Београд, 12.10.2021.
Академик Слободан Вукосавић
заменик председника ЕТРАН

The papers included in the Proceedings were selected in a peer review process and presented at the 65th annual conference of the ETRAN Society (ETRAN 2021) and at the 8th international Conference IcETRAN 2021, both held September 8 – 10, 2021 in Stanišići ethno-village, Republic of Srpska, Bosnia and Herzegovina.

The number of the submitted papers for the ETRAN and IcETRAN conferences was 162 in total. Peer reviewing was done by 266 reviewers. The average number of reviewers per paper was 2. A total of 141 papers was accepted, presented at the two conferences and published in full in these Proceedings.

The joint thematic session “Digital Serbia and Republic of Srpska” gathered scientists, experts, researchers, representatives of universities and governmental representatives who presented their opinions about the significance and development of information technologies and artificial intelligence, their role in the economic development and the corresponding changes in the educational system. Session coordinators were prof. dr. Branko Dokić and prof. dr. Milo Tomašević, while the active participants of the session were Mag. Sci Srdjan Rajčević, Minister of Scientific and Technological Development, Higher Education and Information Society in the government of the Republic of Srpska, dr. Saša Stojanović, Assistant Minister of Education, Science and Technological Development in the government of Republic of Serbia, prof. dr. Milo Tomašević, Dean of the School of Electrical Engineering, University of Belgrade, prof. dr. Zoran Djurić, Dean of the Faculty of Electrical Engineering, University of Banja Luka and prof. dr. Božidar Popović, Dean of the Faculty of Electrical Engineering, University of East Sarajevo.

The coordinator of the special session within the Metrology Section titled “Stochastic Methods in measurements” was Vladimir Vujičić. The coordinator of the special session within the Computers and Artificial Intelligence Section titled “What computers cannot do today” was Boško Nikolić. Within the Power Engineering Section a special session “Electric Power in 21st Century”, organized by the Power Engineering Board of Serbian Academy of Sciences and Arts (SASA).

The member of the ETRAN Society Board Predrag M. Petrović was the coordinator of the plenary thematic session organized as a homage to late dr. Miloljub Smiljanić, Fellow of the ETRAN Society and Secretary General of the Serbian Academy of Engineering Sciences. With the message “Dear Mićo, admiration and respect with gratitude” the speakers were Predrag M. Petrović and academician Dejan B. Popović, ETRAN Society Chairman.

The ETRAN Society Chairman, academician Dejan B. Popović was the coordinator of the plenary thematic session organized as a homage to late academician Ninoslav Stojadinović, Member of ETRAN Society Board and a Fellow of ETRAN Society. With the message “We continue to forward his ideas” the speakers were prof. dr. Danijel Danković, academician Dejan B. Popović, ETRAN Society Chairman and Bratislav Milovanović, academician of Serbian Academy of Engineering Sciences.

We express our special gratitude to the organizers from the Republic of Srpska and our hosts from Bijeljina who contributed to creating working conditions and a fruitful interchange of opinions, as well as a critical review of the results within all sections.

Belgrade, October 12, 2021.
Academician Slobodan Vukosavić
Vice-Chairman of the ETRAN Society

Садржај/Contents

АКУСТИКА/ACOUSTICS - (АК/AKI)	1
AK 1.1 Kriterijumi zvučnog komfora u prostorijama za vežbanje i izvođenje muzičkog programa <i>Dragana Šumarac Pavlović, Tatjana Miljkovic, Miloš Bjelić and Miomir Mijić</i>	3
AK 1.2 Uticaj estimacije frekvencija harmonika na procenu koeficijenta inharmoničnosti čembala <i>Tatjana Miljković, Jovana Damnjanović, Jelena Ćertić and Dragana Šumarac Pavlović</i>	9
AK 1.3 Vreme reverberacije energetskog transformatora <i>Miloš Bjelić, Bogdan Brković, Mleta Žarković and Tatjana Miljković</i>	15
AK 1.4 Analiza upotrebljivosti ekonomičnog audio hardvera prilikom snimanja impulsnih odziva prostorije <i>Marko Licanin, Dejan Ćirić, Darko Mihajlov and Momir Praščević</i>	21
AK 1.5 Uticaj COVID 19 zaštitnih maski na razumljivost govora u srpskom jeziku <i>Miloš Bjelić, Tatjana Miljković, Miomir Mijić and Dragana Šumarac Pavlović</i>	26
AK 1.6 Izdvajanje režima praznog hoda motora sa unutrašnjim sagorevanjem na osnovu audio zapisa <i>Marko Milivojević, Emilija Kisić and Dejan Ćirić</i>	32
AKI 1.1 Whispered Speech Recognition Based on DTW algorithm and μ FCC feature <i>Branko R. Marković and Jovan Galić</i>	37
AKI 1.2 The Experiments in SVM-based Whispering Speaker Identification <i>Jovan Galić, Branko Marković and Đorđe Grozdić</i>	41
AKI 1.3 Cepstrum-Based Pitch Detection of Industrial Product Sound <i>Dejan Ćirić, Marko Janković, Marko Milenković and Miljan Miletic</i>	45
АНТЕНЕ И ПРОСТИРАЊЕ/ANTENNAS AND PROPAGATION - (АП/API)	51
AP 1.1 Karakteristike materijala za štampane antene u opsegu 65-110 GHz <i>Nikola Bošković and Miloš Radovanović</i>	53
API 1.1 Influence of Various EM Models of an Aircraft to Monostatic RCS <i>Tomislav Milošević</i>	57
API 1.2 Utilization of Characteristic Mode Analysis in Coupled Resonators Microstrip Filter Design <i>Ana Đurđević and Milka Potrebić</i>	62
АУТОМАТИКА/AUTOMATION - (АУ/AUI)	67
AU 1.1 Ublažavanje četeringa digitalnog regulatora promenljive strukture za linearne sisteme <i>Boban Veselić, Čedomir Milosavljević, Branislava Peruničić-Draženović, Senad Huseinbegović and Milutin Petronijević</i>	69
AU 1.2 Autonomno kretanje besposadnog vozila po zadatoj putanji primenom algoritma sa aktivnim potiskivanjem poremećaja <i>Momir Stanković and Stojadin Manojlović</i>	75
AU 1.3 Системи за подршку одлучивању базирани на вештачкој интелигенцији у третману умерене форме билијарног панкреатитиса <i>Anja Buljević, Aleksandar Gluhović, Mirna Kapetina, Aleksandar Knežević and Zoran Jeličić</i>	81
AU 1.4 Predikcija ishoda protetičke rehabilitacije nakon amputacije donjih ekstremiteta uz oslonac na algoritme veštačke inteligencije <i>Jovana Arsenović, Aleksandar Knežević, Mirna Kapetina and Zoran Jeličić</i>	87
AUI 1.1 Multipurpose remote monitoring system based on microservice architecture <i>Luka Bjelica, Miloš Panić and Marko Pejić</i>	93

AUI 1.2	Integrated Particle Filter for Multi Target Tracking <i>Zvonko Radosavljević, Dejan Ivković and Branko Kovačević</i>	99
AUI 1.3	Hough transform in visual product quality control <i>Aleksandra Marjanovic, Sanja Vujnović and Zeljko Djurovic</i>	104
AUI 1.4	Some new results on stability of incommensurate fractional systems and their L _p -norms <i>Rachid Malti</i>	109
AUI 1.5	Application of cascade control in the process of flue-gas desulfurization of thermal power plant <i>Goran Kvascev, Zeljko Djurovic and Avram Avramovic</i>	117

БИОМЕДИЦИНСКА ТЕХНИКА/BIOMEDICAL ENGINEERING - (БТ/БТИ)

121

BTI 1.1	EMG feedback for improved control of myoelectric hand prostheses <i>Strahinja Dosen, Pranav Mamtanna, Jack Tchimino, Filip Gasparic and Nikola Jorgovanovic</i>	123
BTI 1.2	Wireless Sensing and Control of Actuation for Machines and Humans <i>Nenad Jovicic</i>	124
BTI 1.3	A Measure of Spasticity Based on the Exponential Fit of the Knee Joint Torque Estimated from the Goniogram During the Pendulum Test <i>Antonina Aleksić and Dejan B. Popović</i>	125
BTI 1.4	Multiple measurements by a pendulum test improve the spasticity assessment in SCI subjects <i>Nikola Babić, Radoje Čobeljić, Slađana Kostić-Smith and Lana Popović Maneski</i>	129
BTI 1.5	Proof of concept platform of an electrotactile Brain Computer Interface <i>Marija Novicic, Vera Miler-Jerković, Olivera Đorđević, Ljubica Konstantinović and Andrey Savić</i>	133
BTI 1.6	Frequency burst modulation outperforms spatial encoding in multi-level vibrotactile stimulation <i>Nikolina Maravić, Jelena Bulatović, Filip Gašparić, Strahinja Došen and Nikola Jorgovanović</i>	137
BTI 1.7	Feasibility Test of Activity Index Summary Metric in Human Hand Activity Recognition <i>Jelena Medarević, Marija Novičić and Marko Marković</i>	142
BTI 1.8	Speech vs. Music Classification Based on EEG Spectral Features Using Artificial Neural Networks <i>Ivan Vajs, Predrag Jekić, Aleksandra Marjanović and Milica Janković</i>	143
BTI 1.9	How TV commercials affect attention and memory? <i>Brana Kostić, Vanja Ković, Vera Miler Jerković and Milica Janković</i>	147
BTI 1.10	Open-source tool for 3D segmentation and rendering of abdominal CT scans <i>Katarina Milićević, Otaš Durutović and Milica Janković</i>	151

ЕЛЕКТРОЕНЕРГЕТИКА/POWER ENGINEERING - (ЕЕ/ЕЕИ)

157

EE 1.1	Metod za inženjersku procenu proizvodnje vetroelektrane <i>Vladimir Katić</i>	159
EE 1.2	Modelling of synchronous generator excitation control system using nonlinear ARX model <i>Mihailo Micev, Martin Ćalasan and Milovan Radulović</i>	163
EE 1.3	Identifikacija parametara mašine jednosmerne struje sa nezavisnom pobudom posle remonta <i>Miroslav Bjekić, Vojislav Vujičić, Marko Rosić and Marko Šućurović</i>	168
EE 1.4	Simulacija histerezisnih petlji interpolacijom harmonijskih komponenti magnetskog polja <i>Srđan Divac and Branko Koprivica</i>	174
EE 1.5	Analiza uticaja magnetske interakcije faza na karakteristike 8/6 SRM-a <i>Dragan Mihić, Mladen Terzić, Žarko Koprivica and Bogdan Brković</i>	180

EEI 1.1	Skin effect implementation in parameterized winding function model of an induction motor	187
	<i>Aldin Kajević, Mario Mezzarobba, Alberto Tessarolo and Gojko Joksimović</i>	
EEI 1.2	Operation Analysis and Determination of Virtual Synchronous Machine Model Parameters	192
	<i>Nikola Krstic, Milutin Petronijevic and Filip Filipovic</i>	
EEI 1.3	Design of LLC Resonant Tank in a Low Power DC/DC Power Converter	199
	<i>Katarina Obradović, Emilija Lukić, Jovana Plavšić and Aleksandar Milić</i>	
EEI 1.4	Implementation and testing of basic algorithms in PV systems with batteries on a common DC link	205
	<i>Katarina Ćeranić, Mila Gligorijević, Lazar Stojanović and Aleksandar Milić</i>	

ЕЛЕКТРИЧНА КОЛА, ЕЛЕКТРИЧНИ СИСТЕМИ И ОБРАДА СИГНАЛА/ELECTRIC CIRCUITS AND SYSTEMS AND SIGNAL PROCESSING - (ЕК/ЕКИ)

211

EK 1.1	KRISTALNI FILTRI ZA OPSEG FREKVENCIJA 150 – 170MHZ	213
	<i>Dragi Dujkovic, Irini Reljin, Lenika Grubišić, Snežana Dedić-Nešić and Ana Gavrovska</i>	
EKI 1.1	Covid-19 and other CT Scan Authentication using Wavelet based Watermarking	217
	<i>Amra Gicić and Ana Gavrovska</i>	

ЕЛЕКТРОНИКА/ELECTRONICS - (ЕЛ/ЕЛИ)

223

ELI 1.1	Monitoring system for AC current up to 20A	225
	<i>Milan Savic, Dejan Stevanovic and Miona Andrejević Stošović</i>	
ELI 1.2	Matlab/Simulink 1D model of longitudinal wave propagation through piezoceramic rings	229
	<i>Igor Jovanović and Dragan Mančić</i>	
ELI 1.3	Arduino-Based Gas and Smoke Detector Realized Using MQ-2 Sensor	235
	<i>Petar Stančić, Aleksandra Stojković and Miljana Milić</i>	
ELI 1.4	A Chisel Generator of JTAG to Memory-Mapped Bus Master Bridge for Agile Slave Peripherals Configuration, Testing and Validation	239
	<i>Vukan Damjanović and Vladimir Milovanović</i>	
ELI 1.5	Allpass Based Double Notch IIR Filters with Constant Phase	245
	<i>Goran Stančić, Ivana Kostić and Stevica Cvetković</i>	
ELI 1.6	Free/Open Source EDA Tools Application in Digital IC Design Curricula	250
	<i>Aleksandar Pajkanovic</i>	
ELI 1.7	Two approaches to automatic configuration of RS-485 network	254
	<i>Nikola Cvetković, Pavle Milenković, Nenad Jovičić and Vladimir Rajović</i>	

МЕТРОЛОГИЈА/METROLOGY - (МЛ/MLI)

261

ML 1.1	Obezbeđenje validnosti rezultata ispitivanja nivoa snage smetnji ponavljanjem merenja	263
	<i>Aleksandar Kovačević, Nenad Munić, Veljko Nikolić and Ljubiša Tomić</i>	
ML 1.2	Očitavanje pseudoslučajnog koda pomoću linearнog niza fotodetektora kod pseudoslučajnih pozicionih enkodera	267
	<i>Ivana Randelović, Dragan Denić and Goran Miljković</i>	
ML 1.3	Snimanje UI karakteristike odvodnika prenapona, interesantna iskustva	271
	<i>Dragan Pejić, Boris Antić, Zoran Mitrovic, Nemanja Gazivoda and Marina Subotin</i>	
ML 1.4	Sortiranje predmeta prema boji akvizicijom videa primenom virtuelne instrumentacije	275
	<i>Branko Stojković, Branko Koprivica, Alenka Milovanović and Tatjana Dlabač</i>	
ML 1.5	Mogućnost primene Hamonovih presloživih otpornika u naizmeničnom režimu	279
	<i>Stefan Mirković, Dragan Pejić, Marina Subotin, Nemanja Gazivoda and Zdravko Gotovac</i>	

ML 1.6	Metoda etaloniranja multifunkcijskog kalibratora za ispitivanje bezbednosti električnih instalacija <i>Đorđe Novaković, Nemanja Gazivoda, Dragan Pejić, Marjan Urek, Ivan Gutai and Zdravko Gotovac</i>	283
ML 1.7	Automatizacija etaloniranja digitalnih multimetara <i>Branislav Lukić, Đorđe Novaković, Nemanja Gazivoda and Platon Sovilj</i>	289
ML 2.2	Razvoj merno-informacionog sistema za podršku pri etaloniranju temperaturnih sondi <i>Aleksandar Dimitrijević, Djordje Novaković, Nemanja Gazivoda and Platon Sovilj</i>	294
ML 2.3	Uređaj za ispitivanje tačke rose <i>Zdravko Gotovac, Rade Peranović, Dragan Pejić and Platon Sovilj</i>	300
ML 2.4	Implementacija komunikacionih i kontrolnih metoda u konceptu Industrije 4.0 <i>Zdravko Gotovac and Marjan Urek</i>	303
ML 2.5	Sistem za merenje i regulaciju temperature u zamrzivačima za čuvanje Pfizer-BioNTech COVID-19 vакcine <i>Milan Šaš, Bojan Vujičić and Dragan Pejić</i>	306
ML 2.6	Edukativni pristup enkriptovanom prenosu podataka u embedded i frontend razvojnim okruženjima <i>Ivan Gutai, Platon Sovilj, Marina Subotin, Marjan Urek, Jelena Milojević and Milica Mitrović</i>	310
ML 2.7	Edukativni primer generisanja i obrade podataka uz alate dostupne u .NET 5, u domenu Metrologije <i>Ivan Gutai, Platon Sovilj, Marina Subotin, Đorđe Novaković, Nemanja Gazivoda and Bojan Vujić</i>	314

МИКРОЕЛЕКТРОНИКА И ОПТОЕЛЕКТРОНИКА/MICROELECTRONICS AND OPTOELECTRONICS, NANOSCIENCES AND NANOTECHNOLOGIES - (MO/MOI)

319

MO 1.1	Efekti zračenja i odžarivanja kod naponsko temperaturno naprezanih p-kanalnih VDMOS tranzistora snage <i>Sandra Veljković, Nikola Mitrović, Snežana Đorić-Veljković, Vojkan Davidović, Snežana Golubović and Danijel Danković</i>	321
MO 1.2	Porast elektroprovodnosti Li-jonskih baterija oblaganjem elektroda metal-oksidnim nano-filmovima <i>Jovan Šetrajčić, Siniša Vučenović, Igor Šetrajčić, Stevo Jaćimovski, Ana Šetrajčić-Tomić, Dušan Ilić and Nikola Vojnović</i>	326
MO 1.3	Performanse sklopova termoelektrični modul-hladnjak namenjenih samonapajajućim sistemima u uslovima prirodnog hlađenja <i>Aleksandra Stojković, Miloš Marjanović, Jana Vračar, Aneta Prijović and Zoran Prijović</i>	330
MO 1.4	Analiza uporednog praćenja temperature površine ohlađenih materijala pri njihovom zagrevanju do ambijentalne temperature <i>Đenadić Stevan, Tomić Ljubiša, Vesna Damjanović and Katarina Nestorović</i>	335
MOI 1.1	Synthesis and characterization of thin copper coatings obtained by sonoelectrodeposition method <i>Ivana Mladenović, Jelena Lamovec, Stevan Andrić, Miloš Vorkapić, Marko Obradov, Dana Vasiljević-Radović, Vesna Radojević and Nebojša Nikolić</i>	340
MOI 1.2	Magnetic Field Generator For Simulation of a Vehicle Movement For a Wide Range of Velocities <i>Milan Stojanović, Jana Vračar, Ilija Neden Dimitriu and Ljubomir Vračar</i>	346
MOI 1.3	Active Matrix Liquid Crystal Display – AMLCD Switching Time Measurements <i>Branko Livada</i>	351
MOI 1.4	Hyper Focal Distance Application for Long Range Surveillance Camera Zoom Lens Focusing Settings <i>Saša Vujić, Dragana Perić and Branko Livada</i>	356
MOI 1.5	Temperature influence on the performance of P3HT:ICBA polymer solar cells <i>Ali R. Khalf, Jovana P. Gojanović, Nataša A. Ćirović, Petar S. Matavulj, Grand Ledet, Mark Hidalgo and Sandra Živanović</i>	362

	МИКРОТАЛАСНА ТЕХНИКА, ТЕХНОЛОГИЈЕ И СИСТЕМИ/MICROWAVE TECHNIQUE, TECHNOLOGIES AND SYSTEMS - (MT/MTI)	369
MTI 1.1	Modeling a Planar Circular Loop Antenna using Artificial Neural Networks <i>Ksenija Pešić, Zoran Stanković and Nebojša Dončov</i>	371
MTI 1.2	Modelling of Conformal Antennas using Time-Domain TLM Method <i>Tijana Dimitrijević, Ekrem Altinozen, Aleksandar Atanaskovic, Jugoslav Jokovic, Ana Vukovic, Phillip Sewell and Nebojsa Doncov</i>	375
MTI 1.3	Reduced Dimensions Planar Rat Race Coupler Design <i>Denis Letavin and Dusan Nesic</i>	379
MTI 1.4	Experimental Analysis of Electromagnetic Interferences Absorber Influence on Metal Enclosure Immunity <i>Nataša Nešić, Slavko Rupčić, Vanja Mandrić-Radivojević and Nebojša Dončov</i>	383
MTI 1.5	Incorporating a Lowpass Filter into a Very Wide Bandpass Filter to Suppress Harmonics <i>Dušan Nešić</i>	387
	НОВИ МАТЕРИЈАЛИ/NEW MATERIALS IN ELECTRICAL AND ELECTRONIC ENGINEERING - (HM/NMI)	391
NM 1.1	Uticaj jona retkih zemalja (Er, Yb, Ho) na karakteristike BaTiO ₃ keramike <i>Vesna Paunović, Vojislav Mitić and Zoran Prijović</i>	393
NMI 1.1	Mössbauer Spectroscopy of Iron-based Chalcogenides <i>Valentin Ivanovski</i>	398
NMI 1.2	An Overview on a Graph Theory Applications New Frontiers in Electronics Materials <i>Vojislav V. Mitic, Branislav M. Randjelovic, Dusan Milosevic, Srdjan Ribar, Ivana Radovic, Markus Mohr and Hans J. Fecht</i>	399
NMI 1.3	Biomolecules and Brownian Motion <i>Vojislav Mitić, Bojana Markovic, Sanja Aleksić, Dušan Milošević, Branislav Randjelović, Ivana Ilić, Jelena Manojlović and Branislav Vlahović</i>	404
NMI 1.4	Reconstruction of fiber reinforcement in epoxy-based composite <i>Aleksandar Stajcic, Vojislav Mitic, Cristina Serpa, Filip Veljkovic, Branislav Randjelovic and Ivana Radovic</i>	409
NMI 1.5	The Neural Network Application on Ceramics Materials Density <i>Srdjan Ribar, Vojislav V. Mitic, Branislav Randjelovic, Dusan Milosevic, Vesna Paunovic, Hans J. Fecht and Branislav Vlahovic</i>	413
NMI 1.6	Structural Characterization of La(Mg _{1/2} Ti _{1/2})O ₃ (LMT) Perovskite for Mobile communications <i>Kouros Khamoushi, Vojislav Mitić, Jelena Manojlović, Vesna Paunović and Goran Lazović</i>	417
	НУКЛЕАРНА ТЕХНИКА/NUCLEAR ENGINEERING AND TECHNOLOGY - (HT/NTI)	421
NT 1.1	Posledica merenja brzih napona Kerovim efektom u polju gama zračenja <i>Nemanja Aranđelović, Dusan Nikezic, Dragan Brajović and Uzahir Ramadani</i>	423
NTI 1.1	Radioactive Waste Management: Construction and Demolition Debris in Geopolymers <i>Ivana Jelić, Marija Šljivić-Ivanović, Tatjana Miljočić, Milica Ćurčić and Slavko Dimović</i>	428

HPGe detector efficiency optimization for the atypical measurement geometry of simulated aerosol filters

Jelena Krneta Nikolić*, Ivana Vukanac, Milica Rajačić, Dragana Todorović, Gordana Pantelić and Marija Janković

Abstract — Gamma spectrometry is widely used method of choice for measurement of environmental samples conducted during monitoring of the environment and contamination control, as well as measurement of radionuclide content in various materials. However, one of the main challenges in this method of spectrometry is the determination of detection efficiency for different energies, different source-detector geometries and different composition of samples. This task is defined as an efficiency calibration of the detector. When using a commercial calibration sources is not possible, or the available sources are not adequate, the optimization of the efficiency calibration has to be performed.

In this paper, the results of the optimization of efficiency calibration for the atypical geometry and composition of the simulated aerosol samples, measured within the Proficiency tests organized by International Atomic Energy Agency (IAEA), performed using EFFTRAN efficiency transfer software, will be presented and discussed.

Index Terms— gamma spectrometry; efficiency calibration, EFFTRAN; optimization

I. INTRODUCTION

Gamma spectrometry is one of the mostly often used measurement methods for determining the radionuclide content in various samples. It is a non-destructive method which can be applied for a wide range of environmental

samples measured within the framework of a monitoring, as well as for contamination control.

This method is based on the interaction of gamma rays emitted from the sample with the active volume of the detector. Semiconductor detectors and among them, high purity germanium (HPGe) detectors, are mostly used due to their high sensitivity and good energy and time resolution. The result of a gamma spectrometric measurement is represented by the spectrum of photons originating from the source, that are collected by the multichannel analyzer (MCA) and the number of photons detected is proportional to the activity of the given radionuclide. The main challenge in this method of measurement is the determination of the detection efficiency which is dependent not only on the type of the detector and the energy of the emitted gamma photons, but also on the type of the measured sample: its geometry and chemical composition, the sample – detector geometry and the presence of the absorber. This task is defined as an efficiency calibration of the detector [1].

The most often used approach to the efficiency calibration is a direct measurement of different calibration sources containing γ -ray emitters and subsequent fitting of obtained results to a parametric function, thus obtaining the efficiency curve – a functional dependence of the efficiency with respect to the energy. Different sample types require different calibration curves. Due to that, this approach requires a large number of calibration sources, produced to mimic the real measured samples to the largest possible degree, which may not be available. This problem is especially pronounced when environmental samples are of interest due to their diversity in composition and structure [2].

When the sample of the atypical geometry or composition is presented, an optimization of the calibration curve using the means available in the laboratory has to be performed. One of the methods of optimization is the efficiency transfer using some type of software. The software calculates the efficiency transfer factors with which the original efficiency for a given energy needs to be multiplied in order to obtain the efficiency in the special case of the measured sample [3]. One of these software is EFFTRAN [4], a user friendly software that calculates efficiency transfer factors and coincidence summing correction factors for cylindrical samples.

In this paper, the results of the efficiency calibration for the atypical geometry and composition of the simulated aerosol samples, measured within the Proficiency tests organized by International Atomic Energy Agency (IAEA), performed using EFFTRAN efficiency transfer software,

will be presented and discussed.

II. MAIN RESULTS AND DISCUSSION

A. Efficiency transfer

The calculations of the efficiency transfer factors are based on the assumption that the detector efficiency for the special case of measured sample can be obtained by multiplying the reference efficiency (obtained by measuring the commercial or laboratory calibration source) by the efficiency transfer factors. In order to calculate these factors, a set of partial differential equations needs to be solved. For the purpose of the efficiency transfer, in our laboratory, EFFTRAN software is often used. It is organized as an user friendly Excel file with three modules. The software performs the needed calculations using a Monte Carlo integration, given the specific data are provided.

The data that the software requires are the detector characteristics (crystal material, diameter and length, thickness of the dead layer, housing geometry and composition, material of the window and window to crystal gap,) and the characteristics of both calibration sample used for the reference calibration curve and the measured sample (the diameter, filling height and thickness of the container, chemical composition and density of the sample matrix). Because the model of the sample, as well as the detector crystal, can be constructed from cylinders only, the only complex operation required in the code is the calculation of the path length traversed through a cylinder of given dimensions by a gamma photon originating from an arbitrary location [4].

The choice of the reference efficiency plays a significant role in the final result, therefore it has to be chosen with care. This is especially important when the geometry of the measured sample differs significantly from the calibration source used for the efficiency calibration of the detector. Also the definition of the calibration source as well as the measured sample has to be performed as precise as possible, especially the chemical composition which has the largest influence on transfer factors. The final result of the calculation is the efficiency for the measured sample which is dependent on the reference efficiency used. The measurement uncertainty of the calculated efficiency is determined according to the following equation:

[5]:

$$u(\varepsilon) = \sqrt{(u(\varepsilon_{ref}))^2 + (u(C))^2 + (u_D)^2 + (u_S)^2} \quad (1)$$

where $u(\varepsilon)$ represents the combined measurement uncertainty of the efficiency for the measured sample, $u(\varepsilon_{ref})$ is the relative uncertainty of the reference efficiency value which has to be calculated, $u(C)$ is the uncertainty of the transfer factors calculated by the program as a statistical uncertainty of the Monte Carlo integration ($\approx 1.2\%$), u_D is the uncertainty associated with the geometry of the detector and u_S is the uncertainty associated with the characteristics of the sample. The, for the measurement uncertainty of the measured activity, this component is combined with other

contributions to obtain the total combined measurement uncertainty.

B. Results and Discussion

As it was said in the previous section, the final efficiency for the measured sample is dependent on the reference efficiency used. It is therefore crucial to perform some sort of validation of the results, when a choice of different reference efficiency is available.

In this investigation, the efficiency for an atypical geometry and composition has been calculated using three different reference efficiencies. The measured samples were simulated aerosol filters containing different artificial radionuclides, printed on a cellulose filter paper, diameter 43 mm, thickness of 1mm. These samples were measured within the World-Wide Open Proficiency test IAEA-TEL-2019-03, World-Wide Open Proficiency test IAEA-TEL-2020-03 and World-Wide Open Proficiency test IAEA-TEL-2020-05, organized by International Atomic Energy Agency (IAEA) during the year 2019 and 2020 [<https://nucleus.iaea.org/sites/ReferenceMaterials/Pages/Inte>rlaboratory-Studies.aspx]. The simulated aerosol filters contained Cs-134, Cs-134 (IAEA-TEL-2019-03 and IAEA-TEL-2020-05) and Ag-110m and Se-75 (IAEA-TEL-2020-03).

Three existing efficiency calibration curves were used for the reference efficiency: spiked charcoal in cylindrical geometry of 100 ml filled to a full, spiked mineralized grass in cylindrical geometry of 100 ml filled with 6.03g of matrix, and 50 ml vial, filled with 4.22g of aerosol [6]. The charcoal efficiency curve was used as it has the similar composition and density, the grass had the closest measurement geometry and the aerosol was used because it is readily used for the measurement of the prepared aerosol filters in the laboratory.

The simulated aerosol filters were measured on 2 p-type HPGe detectors. The duration of the measurement was 5100 s, 60000 s and 240000 s for the filter from IAEA-TEL-2019-03, IAEA-TEL-2020-03 and IAEA-TEL-2020-05 respectively. After the measurement, the activity of the present radionuclides was calculated using the grass matrix reference efficiencies (as it was the closest with the respect to the measurement geometry) in order to obtain the uncorrected results. Then the efficiency transfer was performed using EFFTRAN and the calculated transfer factors were applied in order to obtain the corrected result. Both uncorrected and corrected results were compared to the target value provided by the IAEA in the final report of the said Proficiency tests.

The uncorrected results, the corrected results and the target value for one simulated aerosol filter from each Proficiency test are presented in the Table I

TABLE I

THE RESULTS OF THE SIMULATED AEROSOL FILTER MEASUREMENTS USING DIFFERENT EFFICIENCIES AND THE TARGET VALUE, THE RESULTS WERE GIVEN WITH THE APPROPRIATE MEASUREMENT UNCERTAINTY, COVERAGE FACTOR 1

IAEA-TEL-2019-03					
Element	Uncorrected result [Bq/sample]	Charcoal to filter efficiency transfer [Bq/sample]	Grass to filter efficiency transfer [Bq/sample]	Vial to filter efficiency transfer [Bq/sample]	Target value [Bq/sample]
Cs-137	17.8 ± 0.7	9.6 ± 0.5	12.7 ± 0.6	13.1 ± 0.6	13.02 ± 0.40
Cs-134	21 ± 2	15 ± 1	20 ± 2	21 ± 2	20.28 ± 0.61
IAEA-TEL-2020-03					
Se-75	51 ± 2	23.5 ± 1.1	31 ± 2	29 ± 1	31.3 ± 1.5
Ag-110m	57 ± 2	30 ± 2	35 ± 2	35 ± 2	35.1 ± 3.0
IAEA-TEL-2020-05					
Cs-137	47.7 ± 0.8	25 ± 1	31 ± 1	29 ± 1	28.6 ± 1.5
Cs-134	27 ± 1	16.1 ± 0.7	20.4 ± 0.9	19.1 ± 0.9	20.5 ± 1.1

As it can be seen from the Table I, the uncorrected results differ significantly from the ones obtained using the efficiency transfer, although the composition of the mineralized grass (mainly cellulose and carbon) and the geometry were similar. Also, the transfer from the reference efficiency with the coal matrix produced the results that are significantly lower than the target value, meaning that the obtained efficiency is significantly overestimated. This can be explained by the large difference between the geometry of the reference efficiency which has greater diameter and sample height and therefore is the most diverse from the measured sample. Contrary to that, the transfer from the other two reference efficiency curves produced the results that are in agreement with the target values. For the elements that have multiple gamma lines, the coincidence correction factors were obtained using also EFFTRAN software. As it can be seen, the values for Cs-134, Se-75 and Ag-110m which are corrected for the coincidence summing effect and efficiency transfer from the grass reference efficiency proved to be the closest to the target value. For Cs-137, which has only one gamma emission and do not require coincidence summing correction, better results are obtained by transferring the aerosol reference efficiency. There is a local minimum at the energy of 661 keV in all efficiency curves regardless of the matrix of the calibration source. This leads to underestimation of the efficiency for this energy, which in turn produces an underestimated transferred efficiency. The recommendation for this energy is to use the efficiency obtained directly from the calibration source measurement, rather than from the calibration curve. Also, it is evident that the aerosol calibration source, although it closely represents the real aerosol samples, is not the best choice for the simulated aerosol filters which have an atypical geometry and composition. The mineralized grass calibration source proves to be the best reference calibration for the efficiency transfer since its diameter is very close to the diameter of the measured sample and more important, its thickness and chemical composition are virtually the same.

All the results obtained by using the efficiency transfer from the grass and aerosol matrix are acceptable, while none

of the uncorrected results are acceptable. This obviously

proves that the efficiency transfer has to be performed with the adequate reference calibration curve.

III. CONCLUSION

In this paper we presented the optimization of the efficiency calibration of HPGe detectors for the measurement of the simulated aerosol filters, measured within three Proficiency tests organized by IAEA. In case of the atypical geometry and composition of the measured sample, the efficiency transfer is inevitable, since the uncorrected activities are not in agreement with the target values, although the calibration source used for the efficiency calibration is of the similar geometry and composition. The choice of the reference efficiency curve for the efficiency transfer should be based on the similarities between the thickness and composition of the calibration source and the measured sample, since this choice produces the best results.

ACKNOWLEDGMENT

The research was funded by the Ministry of Education, Science and Technological Development of the Republic of Serbia.
